DETAILED ACTION

Art Rejections:

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-32 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lee et al, U.S. pat. No. 5,999,274, hereafter '274 patent in view of Lee et al, U.S. pat. No. 5,828,468, hereafter '468 patent.

The '274 patent discloses a system and method for selectively spoofing fax communications over digital network comprising:

Art Unit: 2154

a) means (100, fig. 3) at the source device for selectively initiating spoofing some fax communications over a digital network for achieving high throughput, more efficient communications based upon one or more criteria (see col 4, lines 45-65),

b) a router/gateway (54, 56, fig. 3) for connecting multiple spoofed fax communications over first link, e.g., wired/wireless connection, to a second backbone connection, e.g., digital data network (see col 5, lines 27-31 and 54-63).

The '274 patent does not explicitly disclose detailed steps of spoofing the fax communications. Such detailed data spoofing including data conversion and buffering are disclosed in patent '468 (see patent '468).

It would have been obvious to one of ordinary skill in the art at the time the invention was made to utilize such data spoofing in patent '274 because it would have enabled transmitting fax over the digital data network (see col 10, lines 44-61).

It would have been further obvious to one skilled in the art to implement the invention with any conventional network connections and network devices.

Art Unit: 2154
